ORGANIKA · VIETNAM MARKET ENTRY

Executive summary

Decision document for leadership. Prepared by Louis To, Senior Sales Manager, Emerging Channels. Research as of July 2026, refreshed and red teamed 24 Oct 2026. Full sourcing and confidence ratings in the market primer.

THE RECOMMENDATION

Grow Vietnam on a narrow, staged path: one committed distributor structure with Organika holding the registrations and trademarks, official channels only, and a calendar built around Tet. **Lead with Enhanced Collagen**, whose economics fit the premium band, and **magnesium in a Vietnam sized pack**; greens follow in a smaller format. The final SKU order is set on real COGS.

Decision requested: approve a 12 month runway and the resourcing on page 2. Two steps can start now: file our Vietnamese trademarks and obtain Vietnam COGS per SKU, ahead of the 25 to 27 November visit.

The opportunity

~US$0.9B
market, 2024; ~11%/yr to ~US$1.7B by 2030

#1
fastest growing supplement market in Southeast Asia

1 in 4
online supplement sales now via official stores (Jan to May 2025)

-22%
online supplement sales in USD, 2025, as fakes were purged

Why this is the moment

- The 2025 counterfeit crackdown (a 100 ton fake supplement network, jailed influencers, a former food safety chief sentenced to 20 years) moved shoppers toward provably genuine imports. Official stores now carry about a quarter of online supplement sales.
- The open shelves are real: chelated sleep and stress magnesium, daily greens, and clean label Canadian have demand and no official owner. But open is not the same as priced to win, which is why the lead order below follows the economics.
- The winning pattern is proven and copyable: one committed distributor, an origin credential, chain plus official store listings, and QR authenticity (the Doppelherz and Blackmores playbooks).

What is already true for us

- **We already sell in Vietnam** through an existing distributor, Kat Vietnam Trading, with no official Shopee store yet. The partner plan, the registration holder and the trademark position need to be settled before the range expands.
- **Our own product is already grey market in Vietnam:** hand carry sellers ship Enhanced Collagen from Canada today. Without Vietnam packs and a controlled price ladder, an expanded launch competes with cheaper genuine Organika.
- **Registration is the gating risk.** Registrations are not transferable and trademarks are first to file. Internal channel feedback also says new product registrations are currently hard to obtain, and the new Food Safety Law is expected to take effect around 1 January 2027.

The economics

Line	Figure	What it means
Price to shelf multiple	2.4x modeled; 3x to 4x observed	The Vietnam channel runs richer than the model. Trust the stricter number until COGS are in.
Enhanced Collagen	In the premium band	Lands inside VND 650 to 850k at the observed multiple. Lead SKU on economics.
Magnesium bisglycinate	Above band in the Canadian pack	Needs a Vietnam pack or a lower Vietnam price to land in VND 220 to 500k.
Greens	Well above band	Follows in a smaller format; the half pack lands inside VND 350 to 600k.
Import duty (Canada)	0% CPTPP	HS 2106.90.99 with a Form CPTPP certificate of origin; 15% without.
VAT	8% to 31 Dec 2026	Reverts to 10% in 2027.

Collagen, magnesium and greens FOB estimated from 2026 Canadian shelf prices until real COGS replace them. The internal Excel model recomputes every line.

What we are asking leadership to resource

#	Investment	Why
1	**Vietnam COGS per SKU**	The model cannot set a safe price without them; open action from the 22 Oct ops review
2	**Vietnamese trademark filings**	First to file; protects the brand and our position before any partner negotiation
3	**Registration dossiers per SKU**	Free sale certificates, GMP, lab tests and claim evidence; the listing gate
4	**Vietnam packs for magnesium and greens**	Needed to price into the band; each carries an MOQ and its own registration
5	**Launch A&P budget**	Pharmacist education, compliant KOC content and official store vouchers
6	**A partner plan for the existing distributor**	Terms, targets, registration holder and official stores, agreed during the November visit

Top risks

- Registration access and the January 2027 law change; confirm the filing window before committing dates
- Lead SKUs priced above band; set the order on real COGS, not estimates
- Our own grey market undercuts us; Vietnam packs and a price ladder
- Distributor holds the registration or trademark; we hold both

The runway

- Nov to Dec 2026: partner plan, trademarks, COGS, dossiers
- Dec 2026 to Mar 2027: file registrations
- Apr to Jun 2027: official stores live, online launch
- Jun to Aug 2027: Long Chau and Pharmacity push
- Sep to Nov 2027: first Tet sell in (Tet 2028 is 26 Jan)

THE DECISION

Approve the 12 month runway and the six investments above. Filing our trademarks and obtaining Vietnam COGS can start immediately and protect us whatever the final call.
